Summary

Software engineer with early-career experience delivering front-end solutions and data-driven analysis. Built reusable UI components in React, Angular and Vue that were adopted across three major internal applications, improving consistency and development speed. Analyzed operational service metrics to define SLOs and prioritize applications, supporting a 99.97% uptime target. Seeking to apply this blend of development and analytical skills to drive high-quality, reliable software products.

EDUCATION

Concordia University **Aug 2022 - Jun 2026**
Bachelor of Engineering, Software Engineering, with Distinction (C.Edge) *Montreal, QC*

John Abbott College **Sep 2020 - May 2022**
DEC, Sciences *Sainte-Anne-de-Bellevue, QC*

EXPERIENCE

The CSL Group Inc. **May 2024 - Aug 2024**
Business Analyst Intern *Montreal, QC*

- Defined Service Level Objectives (SLOs) and prioritized high-impact applications to support a 99.97% uptime target
- Collaborated with 15+ stakeholders, including senior leadership and executives, to drive alignment between technical solutions and business priorities
- Analyzed operational service metrics across multiple business units to identify performance gaps
- Collaborated with product and engineering teams to support implementation of digital process improvements

Genetec Inc. **Jan 2024 - Apr 2024**
UX Software Developer Intern *St. Laurent, QC*

- Developed reusable UI components using React, Angular, and Vue adopted across 3+ major internal applications and leveraged by multiple engineering teams
- Converted Figma UX mockups into responsive production code, improving UI consistency across applications
- Diagnosed and resolved front-end defects through unit and end-to-end testing
- Collaborated in Agile Scrum teams using Azure DevOps to deliver new features within sprint timelines

PROJECTS

MeMantra | TypeScript, React Native, Expo, Express, PostgreSQL **2026**

- Engineered a full-stack mobile application supporting real-time user interactions for personalized affirmations
- Designed and implemented frontend features and RESTful backend services using Express and PostgreSQL for user data, reminders, and recommendation logic
- Built CI/CD pipelines using GitHub Actions with Jest, Maestro, and static analysis tools to ensure code quality

Neural Network Robustness Study | Python, PyTorch **2026**

- Implemented and compared MLP, CNN, and ResNet architectures under controlled distribution shifts
- Evaluated model robustness across Gaussian noise, blur, and brightness corruptions at five severity levels using accuracy and degradation metrics

Lost-in-Faubourg | React Native, Expo, Google Maps API **2025**

- Developed mobile navigation application providing real-time indoor and outdoor campus routing
- Integrated Google Maps APIs and scheduling features to enhance usability and navigation efficiency
- Implemented automated testing pipelines using Jest and Maestro to improve application reliability

RateMyPeers | React, Go, MongoDB **2024**

- Built full-stack peer evaluation platform enabling performance tracking for students and instructors
- Designed responsive UI components and dashboards to improve feedback visibility and user experience
- Implemented backend services in Go with MongoDB for scalable data storage and retrieval

Soccer Analytics Database | Python, PostgreSQL, Neo4j **2024**

- Designed relational and graph database schemas to analyze multi-league soccer statistics
- Built data pipelines integrating external APIs to generate analytical insights

SKILLS

- **Languages**: Java, Python, JavaScript, TypeScript, C++, SQL
- **Frameworks/Libraries**: React, React Native, Angular, PyTorch, Tailwind, Stencil.JS
- **Technologies**: Node.js, Git, GitHub, Azure DevOps, MongoDB, PostgreSQL, Linux, Figma
